DETAILED ACTION

Election/Restrictions

1. Applicant's election of Group I, Claims 6-11 in the reply filed on April 12, 2004 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in-
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).
- 3. Claim 6 is rejected under 35 U.S.C. 102(e) as being anticipated by Frenkel et al. (U.S. Patent No. 6,538,454). With regard to Claim 6, Frenkel et al. discloses a testing system comprising: a network analyzer (82) having a radio frequency out port (port connected to 80) and a radio frequency in port (port connected to 30); a first coaxial

Application/Control Number: 10/645,229

Art Unit: 2833

cable (80) having a first end connected to the radio frequency out port (port connected to 80) and a second end (connected to 72); a radio frequency test probe (50) having a first end (72) electrically coupled to the second end (connected to 72) of the first coaxial cable (80) and a second end (58); an adapter (70) having a first end (72) in contact with the second end (connected to 72) of the radio frequency test probe (50) and a second end (connected to 52); and a second coaxial cable (52) having a first end (top of 52) connected to the second end (connected to 52) of the adapter (70) and a second end (72) in communication with the radio frequency out port (port connected to 80); wherein the first coaxial cable (80), the radio frequency test probe (50), the adapter (70), and the second coaxial cable (52) all have the same impedance. See Figs. 4 and 10.

Allowable Subject Matter

4. Claims 7-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The references fail to teach, disclose, or suggest, either alone or in combination, the adapter comprising a ground sleeve having a first ground sleeve end adapted to contact a ground lead of a coaxial cable and a second ground sleeve end adapted to contact a ground probe of the test probe; and a signal pin positioned inside of and spaced apart from the ground sleeve, the signal pin having a first signal pin end adapted to contact a signal lead of a coaxial cable and a second signal pin end adapted

Art Unit: 2833

to contact a signal probe of the test probe and in combination with the rest of the limitations of the base and intermediate claims.

Conclusion

- 5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yanagawa et al. (U.S. Patent No. 5,661,404), Oldfield et al. (U.S. Patent No. 5,587,934), Adamian et al. (U.S. Patent No. 5,537,046), Klassen et al. (U.S. Patent No. 5,066,919) and Hayden et al. (U.S. Patent No. 6,724,205) disclose testing systems having coaxial cables, network analyzers and probes.
- 6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Edwin A. León whose telephone number is (571) 272-2008. The examiner can normally be reached on Monday Friday 10:00-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Paula A. Bradley can be reached on 571-272-2800, extension 33. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
